SECURITY & COMPLIANCE ARE THE MOST CHALLENGING ORGANIZATIONAL DISCIPLINE TO UNDERSTAND, IMPLEMENT & MAINTAIN

ABOUT

Regency Safety Services & Equipment (RSSE), is well capitalized by one of the largest conglomerates operating for more than 4 decades in Qatar. RSS's affiliation with its parent company provides the opportunity for RSSE to draw upon an even deeper domain of experience in world of e-Security & Surveillance Solutions.

Regency Safety Services & Equipment was established in 2011 to provide our clients with secured environments using progressive, cutting-edge security solutions. RSSE provides a wide range of security solutions, from CCTV and access control to manned security services, for residential and commercial establishments.

Professionalism and dedication are the cornerstones of the commitment that we make to each of our valued clients.

MISSION

Current areas of focus will be successful implementation of our product range across Qatar which includes – CCTV, Access control system, Parking Management

VISION

To emerge as leading Security Services Company within Qatar for wide range of security solutions starting from e-Security installation till manned services covering residential, commercial & corporate landscape.

Access Control System

ACS give access to different building locations (usually implemented by automatic unlocking of doors) through different means of authentication of people (by magnetic or RFID identification cards, by finger print, IRIS or face recognition).

IP-CCTV System

CCTV stands for Closed Circuit TV (again a very old acronym which shows the old "electrical" roots of such systems). Simply put, these are the camera systems setup inside and outside of buildings to provide monitoring surveillance.

Parking Management System

It's an intelligent and cost effective Car parking management system that would ease the vehicle parking management and improve convenience in managing vehicle parking slots and parking buildings at malls, hospitals, parks, public areas, hotels and so on.

Bollards/Barriers/Road Blockers

All of this explain different technologies for controlling public and private vehicle transit and access to rest areas, even with high traffic volumes

Automatic Number Plate Registration (anpr)

ANPR is a technology that uses optical character recognition on images to read vehicle registration plates.

Audio Video Intercoms

An audio and video intercom system can help secure your property by allowing you to visually confirm, and audibly speak to visitors to your home or business, without risking forced entry by unlocking / opening the front door.

Intrusion Detection System

An intrusion detection system (IDS) is a system that monitors network traffic for suspicious activity and issues alerts when such activity is discovered.
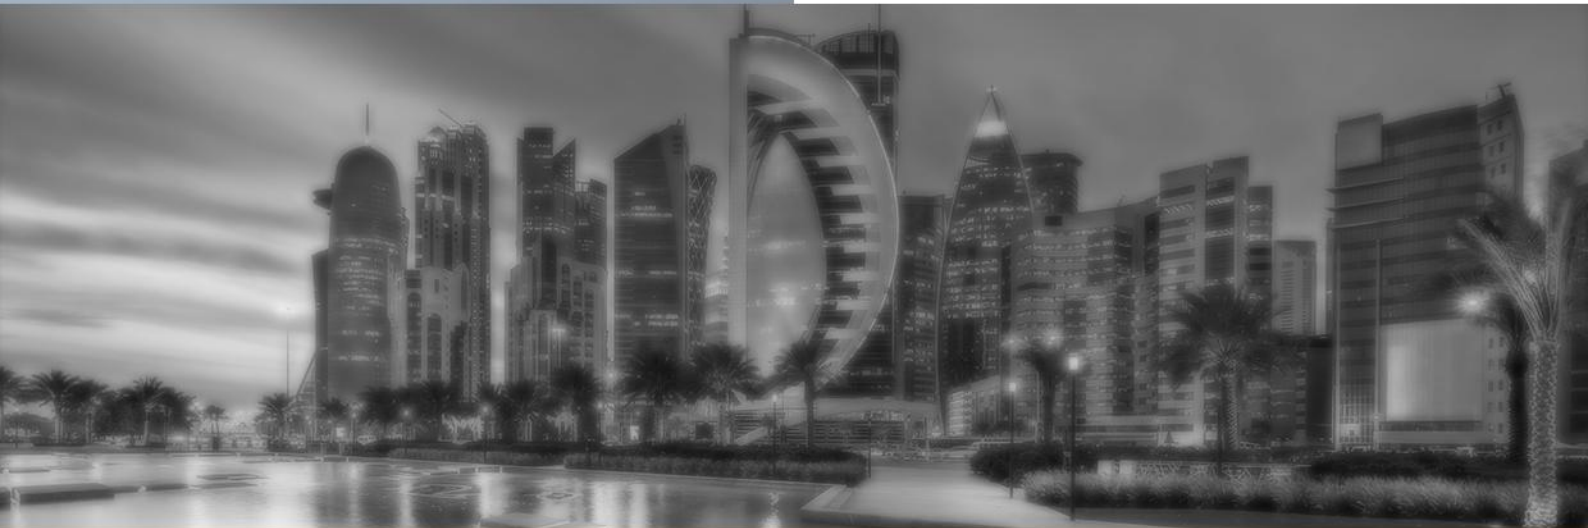

Public Address & Voice Alarm System

PAVA systems are installed within buildings where there is a need to provide clear concise spoken messages either for general day to day messages or in the event of an emergency to safely evacuate occupants.

Disable Toilet Alarm System

This system has been designed for use in toilets and bathrooms to quickly enable helpers to locate any person who is in need of assistance.

Disabled Refuge System

Disabled refuge units (also referred to as 'remotes' or 'outstations') are one part of an 'Emergency Voice Communication' (EVC) system and are typically mounted in 'disabled refuge areas'. Any person requiring assistance for the evacuation will await help in the designated refuge areas.

Panic Alarm System

This is an electronic device designed to assist in alerting someone in emergency situations, where a threat to persons or property exists. It is usually triggered by pressing an electronic panic button, which can be either wired or wireless.

Background Music System

This system is a combination of speakers, music players, sub woofers and mixers with amplifiers commonly used in Cafes, Pubs and Retail Stores. Imagine having the possibility to broadcast the same source simultaneously to multiple remote areas while being able to control it all from a single control panel, PC, smartphone or a tablet.

SMATV / IPTV / Integrated Reception System (IRS)

SMATV (Satellite Master Antenna Television), CATV (Cable Television), and IPTV (IP Television) all explain different technologies to provide a TV distribution system within a building, interconnecting multiple television sets to a single source (usually called Head End) so each television can select the desired watching channel from a selection list.

An integrated reception system (IRS) provides broadcast signals from multiple sources (typically terrestrial television, FM radio, DAB digital radio and satellite TV) to multiple outlets, via a single aerial cluster and signal booster-distributor
